## МИНИСТЕРСТВО ОБРАЗОВАНИЯ РЕСПУБЛИКИ БЕЛАРУСЬ БЕЛОРУССКИЙ ГОСУДАРСТВЕННЫЙ УНИВЕРСИТЕТ ФАКУЛЬТЕТ ПРИКЛАДНОЙ МАТЕМАТИКИ И ИНФОРМАТИКИ

Кафедра дискретной математики и алгоритмики

## КОЛЕБАНИЯ ОДНОРОДНОЙ С УПРУГО ЗАКРЕПЛЕННЫМИ КОНЦАМИ СТРУНЫ

Лабораторная работа 1

Бинцаровского Леонида Петровича студента 4 курса 3 группы, специальность «информатика»

## Вариант 4

Условие задачи:

$$u_{tt} = a^2 u_{xx}$$

$$\begin{cases} u_x(0, t) + hu(0, t) = 0 \\ u_x(l, t) - hu(l, t) = 0 \\ u(x, 0) = x \\ u_t(x, 0) = -x \end{cases}$$

Решение:

$$(1) u(x,t) = X(x)T(t)$$

$$XT'' = a^2X''T$$

$$\frac{T''}{a^2T} = \frac{X''}{X} = -\lambda^2$$

Получаем:

$$(2) \qquad T^{''} + \lambda^2 a^2 T = 0$$

(3) 
$$X'' + \lambda^2 X = 0$$

Решаем (2). В случаях  $\lambda < 0$  и  $\lambda = 0$  получаем тривиальное решение X(x) = 0. Значит полагаем  $\lambda > 0$ .

2

В результате решения (2) получаем:

$$X(x) = C_1 \cos \lambda x + C_2 \sin \lambda x$$

Подставляя граничные условия получим:

$$(4) \qquad hC_1 + \lambda C_2 = 0$$

$$(5) \quad (\lambda C_2 - hC_1)\cos\lambda l - (\lambda C_1 + hC_2)\sin\lambda l = 0$$

Выразим из (3) 
$$C_2$$
:  $C_2 = \frac{-hC_1}{\lambda}$ 

И подставим в (4):

$$2hC_1\cos\lambda l - \left(C_1\frac{\lambda^2 - h^2}{\lambda}\right)\sin\lambda l = 0$$

Полагаем 
$$C_1 \neq 0$$
. 
$$2h\cos\lambda l - \left(\frac{\lambda^2 - h^2}{\lambda}\right)\sin\lambda l = 0$$

Разделим на  $\sin \lambda l$ :

$$2h\cot\lambda l - \left(\frac{\lambda^2 - h^2}{\lambda}\right) = 0$$

Получаем уравнение

$$\cot \lambda l = \left(\frac{\lambda^2 - h^2}{\lambda 2h}\right)$$

Это уравнение имеет множество корней  $\lambda_1, \ \lambda_2, \ \lambda_3, \dots$  Тогда  $\lambda = \lambda_n, \ n = 1, 2, 3, \dots$ 

Имеем:

$$X_n(x) = C_1 \cos \lambda_n x + C_2 \sin \lambda_n x$$

Пусть  $C_1 = \lambda_n$ , *тогда*  $C_2 = -h$ . И в итоге получаем:

(6) 
$$X_n(x) = \lambda_n \cos \lambda_n x - h \sin \lambda_n x$$

Вернемся к (1), подставив  $\lambda_n$ 

$$T'' + \lambda_n^2 a^2 T = 0$$

Получаем решение:

(7) 
$$T_n(t) = A_n \cos a \lambda_n t + B_n \sin a \lambda_n t$$

Подставив (6) и (7) в (1) получим:

$$u(x,t) = \sum_{n=1}^{\infty} (A_n \cos a \lambda_n t + B_n \sin a \lambda_n t)(\lambda_n \cos \lambda_n x - h \sin \lambda_n x)$$

Подставив начальные условия, получаем:

$$\sum_{n=1}^{\infty} A_n (\lambda_n \cos \lambda_n x - h \sin \lambda_n x) = x$$

$$\sum_{n=1}^{\infty} a \lambda_n B_n(\lambda_n \cos \lambda_n x - h \sin \lambda_n x) = -x$$

Вычисляем коэффициенты Фурье  $A_n$ ,  $B_n$ 

$$A_n = \frac{1}{\left\|X_n\right\|^2} \int_0^l s(\lambda_n \cos \lambda_n s - h \sin \lambda_n s) ds$$

$$B_n = -\frac{1}{\left\|X_n\right\|^2} \int_0^l s(\lambda_n \cos \lambda_n s - h \sin \lambda_n s) ds$$
Где  $\left\|X_n\right\|^2 = \int_0^l (\lambda_n \cos \lambda_n x - h \sin \lambda_n x) dx$ 

Вычислениями в Wolfram Mathematica было получено, что  $\left\|X_n\right\|^2 = \frac{l {\lambda_n}^2 + h^2 l - 2h}{2}$ 

$$||X_n||^2 = \frac{l\lambda_n^2 + h^2l - 2h}{2}$$

Тогда получаем, что:

(8) 
$$A_n = \frac{2}{l\lambda_n^2 + h^2l - 2h} \int_0^l s(\lambda_n \cos \lambda_n s - h \sin \lambda_n s) ds$$

(8) 
$$A_{n} = \frac{2}{l\lambda_{n}^{2} + h^{2}l - 2h} \int_{0}^{l} s(\lambda_{n}\cos\lambda_{n}s - h\sin\lambda_{n}s)ds$$
(9) 
$$B_{n} = -\frac{2}{(l\lambda_{n}^{2} + h^{2}l - 2h)a\lambda_{n}} \int_{0}^{l} s(\lambda_{n}\cos\lambda_{n}s - h\sin\lambda_{n}s)ds$$

Вычисляем (8) и (9) в Wolfram и получаем:

$$A_n = \frac{-2\lambda_n + 2(1+hl)\lambda_n \cos \lambda_n l - 2(h-l\lambda_n^2)\sin \lambda_n l}{h(hl-2)\lambda_n^2 + l\lambda_n^4}$$

$$B_n = -\frac{-2\lambda_n + 2(1+hl)\lambda_n \cos \lambda_n l - 2(h-l\lambda_n^2)\sin \lambda_n l}{(h(hl-2)\lambda_n^2 + l\lambda_n^4)a\lambda_n}$$

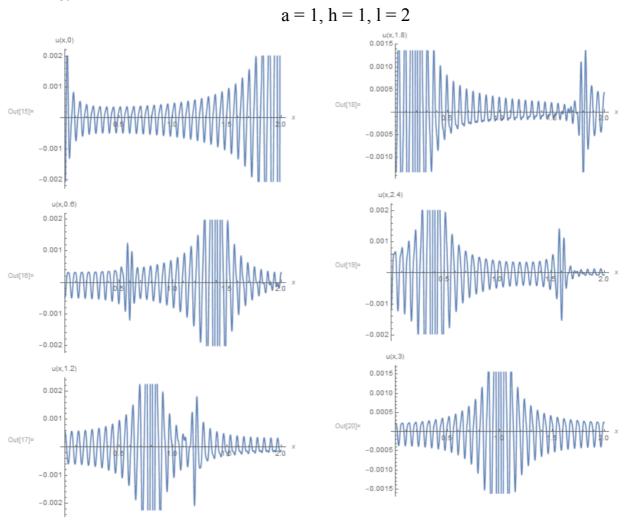

Подставив полученные коэффициенты, получим итоговую функцию. 
$$u(x,t) = \sum_{n=1}^{\infty} (\frac{-2\lambda_n + 2\left(1 + ht\right)\lambda_n \cos\lambda_n t - 2(h - t\lambda_n^2)\sin\lambda_n t}{h\left(ht - 2\right)\lambda_n^2 + t\lambda_n^4} \cos a\lambda_n t - -\frac{-2\lambda_n + 2\left(1 + ht\right)\lambda_n \cos\lambda_n t - 2(h - t\lambda_n^2)\sin\lambda_n t}{(h\left(ht - 2\right)\lambda_n^2 + t\lambda_n^4)a\lambda_n} \sin a\lambda_n t)(\lambda_n \cos\lambda_n x - - h\sin\lambda_n x)$$

В системе Wolfram Mathematica можно найти значения  $\lambda_n$  при различных значениях h. Результаты представлены ниже:

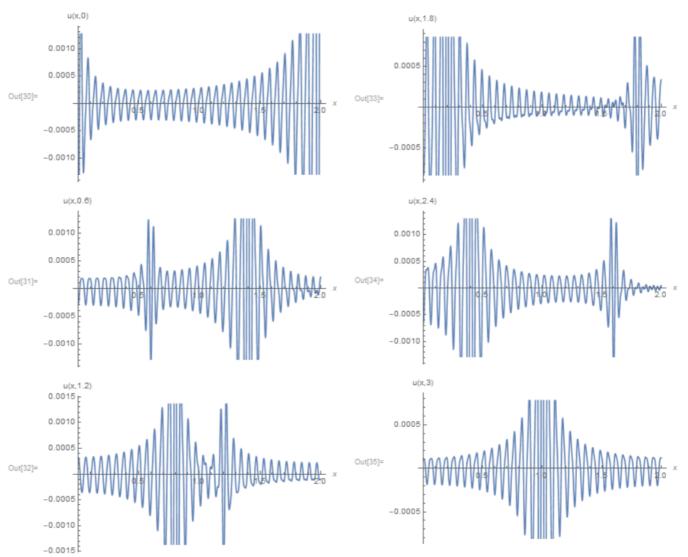

```
h = 1:
```

```
\ln[88] = \texttt{root}[n_{\_}] := \texttt{NSolve}[\texttt{Cot}[2 * x] = (1 - x^2) \ / \ (2 * x) \& 100 * n < x \le 100 * (n + 1), \texttt{Reals}];
